Source sessions
(e.g. wood setup)
Base model
(trained on source)
Round $r = 1, \ldots, R$
initial
weights
Target pool
(unlabelled frames
of the new setup)
Strategy selects
b frames
Oracle reveals
ground-truth boxes
(simulated user)
Fine-tune on all
labelled frames
next round: model used to score the pool
Target test
(held-out sessions,
never queried)
Evaluate: AP and
error of walking-path
metrics
repeat until the label budget is spent;
strategies × scenarios × seeds,
always compared with random selection
